Art Unit: 1711

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-12 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-3 and 6-19 of copending Application No. 10/815,894. Although the conflicting claims are not identical, they are not patentably distinct from each other because both sets of claims are directed to pressure sensitive adhesives comprising a mixture of diol and triol and an aliphatic asymmetric diisocyanate and to the same process for making adhesive articles.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

3. Claims 1-8; 10-12 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1 of copending Application No. 10/190,799. Although the conflicting claims are not identical, they are not patentably distinct from each other because the pressure sensitive

Art Unit: 1711

adhesive and the method of preparing are the same as that shown in the disclosure of the copending application and claimed in claim one.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

4. Claims 1-12 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-10, 15-24 and 27-28 of copending Application No. 10/826,965. Although the conflicting claims are not identical, they are not patentably distinct from each other because the pressure sensitive adhesive of the tape of the copending claims is the same as the pressure sensitive adhesive of the claims of this application. The adhesive is obvious over a tape comprising the adhesive.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented:

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 1-8 and 10-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Schumann (2003/0059706).

Schumann discloses, in the example or paragraphs 142-143, a pressure sensitive adhesive comprising an asymmetric aliphatic diisocyanate and a mixture of polyoxypropylene glycol having a molecular weight less than 1000 and polyoxypropylene triol having a molecular weight greater than 1000 and made at an NCO/OH ratio of 0.95/1 in the absence of solvent or water. The ratio of OH groups of the diol to those of the triol is 0.75. Paragraphs 112-113 show the same process for coating on a substrate.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rachel F. Gorr whose telephone number is 571-272-1072. The examiner can normally be reached on Mon., Tues., Thurs., Fri., from 7:00 AM to 5:30 PM.
